Construction Connection

Danoski Clutts Building Group has completed construction on the Welcome to Las Vegas Store at the Grand Canal Shoppes in the Venetian Hotel and Casino. The 3,000-square-foot retail project was awarded to the decade-old construction firm by owner Marshall Retail Group. The DCBG team was able to fast track the project for completion in just one month. The project is the latest first-generation tenant improvement projects for DCBG and included framing, drywall, painting, flooring, fire sprinkler, fire alarm, mechanical, electrical, storefront glazing and backlit individual lettering signage. The project also included the installation of a custom slatted "Mega-Wall" for fixtures and additional display area. The open floor plan features Las Vegas themed T-shirts, apparel and other souvenirs for travelers to remember and share their Las Vegas experience.

The Carpenter Sellers Del Gatto Architects-designed City of Henderson Senior

Photo provided

The Henderson Senior Center has been certified LEED Gold. The Carpenter Sellers Del Gatto-designed facility includes a ground source well, pervious concrete to retard runoff and flooring made of renewable materials.

Facility recently received LEED Gold certification. The 29,350-square-foot single-story senior facility was

developed by the city to address a growing need in their community. Carpenter Sellers Del Gatto worked with the city and an active group of seniors to create a facility that "sits

lightly on the land” both aesthetically and environmentally. The senior center houses a commercial kitchen that serves 800 meals a day, a dining area, wellness center, crafts rooms, game room, fitness/weight rooms, multipurpose room, conference rooms, movie room and administration spaces. Outdoor spaces include a barbecue area and exterior game spaces. Sustainable aspects of the project include a ground source well field that is shared between the Senior Facility and adjacent aquatics center, flooring such as cork and marmoleum which are made from rapidly renewable materials and pervious concrete to help reduce run-off.
